## SUMMARY

---

A motivated Machine Learning Engineer and Data Science postgraduate at Deakin University, combining a strong foundation in AI/ML with hands-on experience in chatbot development, data analytics, NLP, and full-stack development. Holds a Bachelor of Engineering (Electronic & Telecommunication) from Thakur College of Engineering and Technology (GPA 7.79). Demonstrated ability to build end-to-end ML pipelines, LLM-powered applications, automated news intelligence systems, and computer vision models. Passionate about applying transformative AI solutions to real-world problems.

## PROJECTS

---

### AcadBot [Link](#)

- A Telegram bot designed to assist students with academic needs. Features include natural language Q&A, resource discovery via commands, and PDF question-answering by uploading documents.
- Integrated with OpenAI and ChatPDF APIs.
- Deployed live at [t.me/Acad23Bot](https://t.me/Acad23Bot).
- Tech: Python, Telegram Bot API, OpenAI API, ChatPDF API, HTML, CSS

### AusFlash [Link](#)

- An end-to-end automated news intelligence pipeline for Australia, inspired by InShorts.
- Scrapes 20+ global sources (BBC, Al Jazeera, NYT, TechCrunch, etc.) via Apify, filters stale and duplicate articles using TF-IDF cosine similarity, classifies articles into 9 news sections via keyword matching, and summarises each article to 60 words using BART/DistilBART locally.
- Supports real-time automation running every 30 minutes.
- Tech: Python, Apify, BART, DistilBART, PEGASUS (HuggingFace), scikit-learn, Pandas, TypeScript, GitHub Actions

### IndianLeftOver (Recipe Recommendation System) [Link](#)

- A full-stack recipe recommendation web application that suggests Indian recipes based on available ingredients using cosine similarity.
- Features customisable UI themes (dark/light), colour scheme controls, and font settings.
- Developed collaboratively with Rajan Gupta.
- Deployed on Vercel.
- Tech: React.js, SCSS, Flask, Python, cosine similarity, Jupyter Notebook

### YouTube Q&A Bot [Link](#)

- A chat application that enables users to ask natural language questions about YouTube video content.
- Integrates a Flask backend with OpenAI NLP models and a React frontend for an interactive Q&A experience.
- Tech: JavaScript, Python, Flask, OpenAI API, React, HTML, CSS

### Electronic Health Records (EHR) System [Link](#)

- A project addressing the digitisation and management of patient medical records, including medical history, medications, test results, and diagnoses.
- Aims to reduce administrative burden for healthcare providers through structured digital record handling.
- Tech: Python

### CarPool [Link](#)

- A carpooling application developed during a hackathon, implementing route-matching and pooling logic.
- Includes a routing algorithm, data-driven matching from CSV datasets, and route difference analysis via Jupyter Notebook.
- Tech: Python, Jupyter Notebook, JavaScript

## EXPERIENCE

---

### Crew Member

Mad mex

Nov '24 — Present  
Glen Waverley, VIC, Australia

- Cross-trained in front-of-house and grill roles within a fast-paced QSR environment.
- Delivered exceptional customer service while maintaining food safety and hygiene standards.
- Prepared fresh, high-quality Mexican dishes adhering to consistent recipe standards.

### Crew Member

7-ELEVEN

Aug '25 — Present  
Nunawading, VIC, Australia

- Delivered efficient customer service handling fuel and in-store transactions accurately.
- Maintained cleanliness and safety across the fuel station and store, including restocking and operational compliance.
